

WHY NOT NOW!

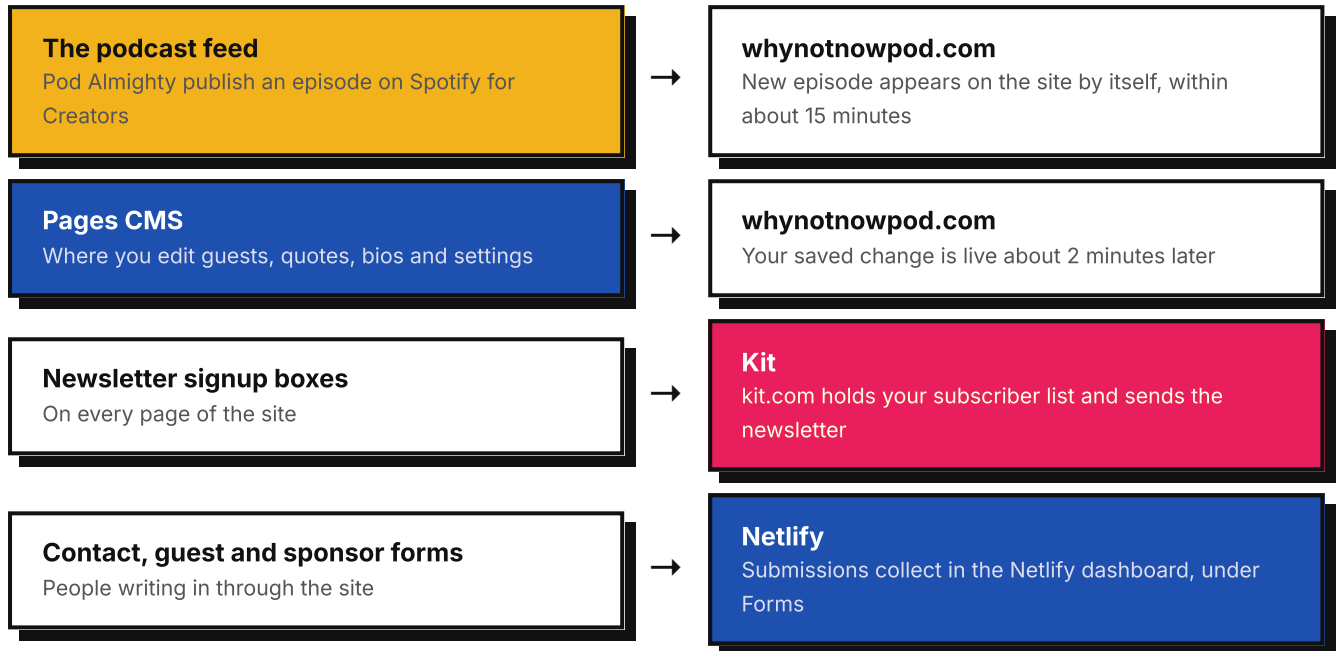

The Website Handbook

Everything you need to run whynotnowpod.com. No coding, no jargon, nothing you can break.

For Chloe, Emma and whoever looks after the site.

HOW IT ALL FITS TOGETHER

The website mostly runs itself. There are four moving parts, and each one has one job:

The golden rules

- **Episodes are automatic.** Nobody ever adds an episode to the website. Publish the podcast and the site catches up on its own.
- **Everything else is edited in Pages CMS.** One website, one place to change it.
- **You cannot break it.** Every save is kept in history, so any change can be undone. Edit freely.

Timing cheat sheet: new podcast episode, about 15 minutes. Any edit you save in Pages CMS, about 2 minutes. If a change has not appeared, wait a moment and refresh the page.

LAUNCH DAY: LIFTING THE CURTAIN

Right now the site shows a **coming soon** holding screen to the public. The full website is finished and waiting behind it. Revealing it is one switch:

- 1 Go to app.pagescms.org and sign in (Chapter 3 explains access).
- 2 Open the **Site settings** section in the left menu.
- 3 Find **Holding page mode** at the top and switch it **off**.
- 4 Click **Save**. About two minutes later, whynotnowpod.com shows the full site.

HOLDING PAGE MODE

☐ **Off**

While on, every visitor sees the coming-soon screen (newsletter signups still work). Switch off on launch day to reveal the full site.

Save

What the switch looks like in Pages CMS. Off means the site is fully visible.

Changed your mind? Switch it back on and save. The curtain goes back up just as quickly. While the holding page is up, newsletter signups still work, so the list keeps growing.

GETTING ACCESS

The website editor lives at app.pagescms.org and you sign in with a **GitHub** account. GitHub is where the website's files are kept safe; you never need to look at it directly, it is just your key to the door.

First time only

- 1** Create a free account at github.com (a personal email is fine).
- 2** Tell Gareth your GitHub username. He adds you as a collaborator, and GitHub emails you an invitation. Accept it.
- 3** Go to app.pagescms.org, choose **Sign in with GitHub**, and approve when asked.
- 4** Open the **whynotnow** project. You are in.

Every time after that

app.pagescms.org, Sign in with GitHub, open the project. Ten seconds.

What you will see

SECTION	WHAT IT CONTROLS
Guests	The guest roster: photos, one-liners, biographies
Episode extras	Key takeaways, links and the guest for each episode
Hosts	Chloe and Emma's photos and biographies
Quote cards	The big colourful quote wall on the homepage
Site settings	Holding page, social links, emails, show descriptions
Media	All the photos on the site, with an upload button

ADDING A GUEST

The job you will do most often. Budget five minutes per guest.

- 1** In Pages CMS, open **Guests** and click **Add entry**.
- 2** Fill in the **Name** and a punchy **One-liner** about their reinvention.
- 3** Click the **Photo** field and upload their picture. Square-ish photos look best.
- 4** Pick one or two **Themes**.
- 5** Set **Order** (lower numbers show first on the page).
- 6** Write the **Biography**: two or three short paragraphs about what they walked away from and what they built.
- 7** Ready to publish? Switch **Hide from the site** off. Not ready? Leave it on and the guest stays invisible.
- 8** Click **Save**. Check whynotnowpod.com/guests two minutes later.

NAME

Juliet Barratt

ONE-LINER

Co-founded Grenade at the kitchen table.
Sold it for millions.

PHOTO

juliet-barratt.jpg 

EPISODE LINK

(empty until her episode is out)

THEMES

Business × Starting over ×

ORDER

1

HIDE FROM THE SITE

☐ Off (published)

Save

A filled-in guest form.

The Episode link field connects the guest card to their episode. Fill it in when the episode is live: it is the last part of the episode's web address on your site. Open the episode on whynotnowpod.com/episodes and copy everything after "episodes/" from the address bar.

EPISODE EXTRAS

Every episode gets its own page automatically, with the show notes from the podcast feed. This section adds the extras that make those pages shine: **key takeaways**, **links mentioned**, and the **guest connection**.

- 1** Open the episode on whynotnowpod.com/episodes and copy its address ending, e.g. `grenades-juliet-barratt-on-selling-up` (everything after "episodes/").
- 2** In Pages CMS, open **Episode extras**, click **Add entry**, and paste that into the **Episode** field.
- 3** In **Guest**, type the guest's filename from the Guests section, e.g. `juliet-barratt`. This puts their photo and bio on the episode page.
- 4** Add three to five **Key takeaways**: the moments listeners will want to remember.
- 5** Add any **Links** mentioned in the episode (a label and a web address each).
- 6** Save. The episode page updates within two minutes.

KEY TAKEAWAYS

The kitchen-table decision that started everything

Why "no budget" was their biggest advantage

Her rule for knowing when to sell

Takeaways appear on the episode page with yellow star bullets.

Skipped this? No harm done. The episode page still works with just the show notes from the feed. Extras are polish, not homework.

QUOTES, HOSTS & SETTINGS

The quote wall

Open **Quote cards**. Each quote has its text and a card colour (ink, yellow, magenta or blue). Add, reword, reorder or delete, then Save. Keep them short: they are set very large on the homepage and Our Story page.

Host bios

Open **Hosts**, pick Chloe or Emma. The **Short bio** is the homepage card; the **Full biography** appears on Our Story. Photos can be swapped right there.

Site settings, field by field

FIELD	WHAT IT DOES
Holding page mode	The launch-day curtain (Chapter 2)
Podcast RSS feed URL	Where episodes come from. Leave it alone unless the podcast moves host
Trailer embed URL	Optional trailer player for the pre-launch homepage
Kit form ID	Connects signup boxes to the newsletter. Set once, leave alone
Contact / Press email	The addresses shown on the Contact page
Show descriptions	The official short and long blurbs (also on the Press Kit page)
Social platforms	One entry per platform: the link, and a Live switch

New social account? Site settings, find the platform, paste the profile link, switch Live on, Save. Its icon and buttons appear across the whole site. Waiting on YouTube? Leave it off until the channel exists.

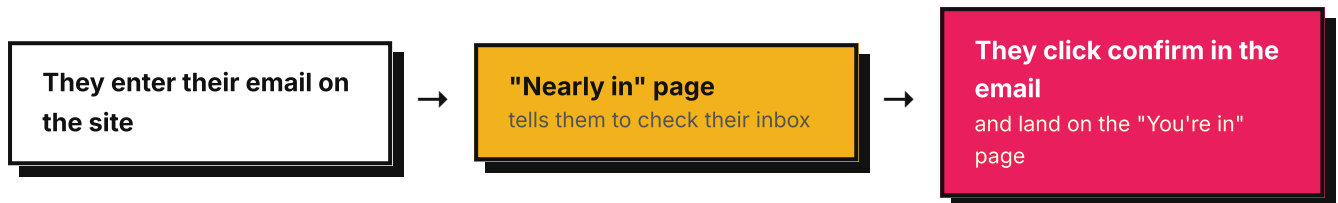

Photos and the Media section

Media shows every image on the site. Upload phone photos as they are; big is fine, blurry is not. Guest photos look best roughly square.

THE NEWSLETTER (KIT)

Every signup box on the website feeds one list, held at **kit.com**. The Kit login belongs to the show (ask Chloe).

How a signup works

Only confirmed people count as subscribers (that is the law working as intended, and it keeps the list healthy).

Seeing your subscribers

In Kit: **Subscribers**. The headline number is confirmed subscribers. People marked "unconfirmed" signed up but have not clicked their email yet.

Sending the weekly email

- 1** In Kit, go to **Broadcasts**, then **New broadcast**.
- 2** Leave recipients as all subscribers.
- 3** Write it like a message to one friend: the new episode, one honest story, one nudge.
- 4** Use **Preview** → **send test email** to yourself first. Always.
- 5** Happy? **Send** or schedule it.

Careful: a real broadcast goes to the whole list and cannot be unsent. Test first, every time.

ENQUIRIES FROM THE SITE

Three forms bring people to you, and all their messages collect in one place:

FORM	WHO USES IT	WHAT TO DO WITH IT
Contact	General hellos, press, ideas	Reply from hello@whynotnowpod.com
Share your story	Would-be guests pitching themselves	Your guest pipeline: review weekly
Request the partner deck	Brands interested in sponsoring	Send the partner deck, start the conversation

Where messages arrive

- 1 Sign in at app.netlify.com (Gareth holds this login for now).
- 2 Open the project, then **Forms** in the left menu.
- 3 Each form lists its submissions with dates and details.

Do this once: in Forms, open **Settings and usage** and add an email notification to hello@whynotnowpod.com. After that, every submission lands in the inbox by itself and nobody has to remember to check the dashboard.

Heads up: the sponsor form promises a partner deck. Make sure a PDF deck exists before launch, so the first brand that asks gets a same-day reply.

IF SOMETHING LOOKS WRONG

SYMPTOM	ALMOST ALWAYS THE FIX
My edit is not showing	Wait 2 minutes, then hard refresh (Cmd+Shift+R). On a phone, close and reopen the browser
New episode not on the site	It appears within about 15 minutes of the podcast going live. Check it is actually published on Spotify first
A guest I added is invisible	Their Hide from the site switch is still on. Turn it off and Save
Guest card does not link to the episode	The Episode link field is empty or has a typo. Copy it fresh from the episode page address
Newsletter email in junk/spam	Rare since the domain was verified. Mark it "not junk" and it learns
Cannot sign in to Pages CMS	Use Sign in with GitHub , not email. Still stuck? Your GitHub invite may be pending
Something genuinely broken	Do not panic, nothing is lost. Note what you did and contact Gareth

WHO HOLDS WHAT

SERVICE	JOB	LOGIN HELD BY
Pages CMS + GitHub	Editing the website	Gareth (invites: Chloe, Emma, PA)
Kit (kit.com)	Newsletter and subscriber list	Chloe · hello@whynotnowpod.com
Netlify	Hosting + form submissions	Gareth
GoDaddy	The domain name + email service	Chloe / Emma
Spotify for Creators	Publishing the podcast	Pod Almighty

Keep logins in a password manager, not in emails or WhatsApp. Never share the GoDaddy login: whoever holds it controls the domain and the email.

That's everything. Stop waiting. Start publishing. Why not now?
